

Skillify

Learning Path

We teach people to code and land a job in tech. No previous experience is necessary. We work with people of all backgrounds to turn them from zero to hero in no time.

1

Coding Basics

Learn what code is and how it works. You'll build small websites and programs to get introduced into the world of coding. It won't seem like magic and you'll be able to have meaningful conversations about code with people in the tech industry.

2

Web Development

Learn how to build complex and interactive websites. Projects will include building a clone of popular apps like Spotify and Instagram. This stage will make you employable!

3

Coding Interview Prep

Learn where to find remote jobs in tech and how to pass coding interviews. This stage also includes resume critiques and mock interviews.

4

Mobile Development

Learn how to build mobile applications and double the number of jobs you can apply to. This advanced skill will set you apart in the job market. Employers will be drooling over you.

5

Intro to Web3

Learn the basics of cryptocurrency, NFTs, and all things Metaverse. This industry is exploding, with new jobs being posted every day. The field is too new for there to be experts, so now is a great time to get ahead and future-proof your career.
